

# ENVIRONMENTAL LEAD NEWSLETTER

September – October 1999

## Updates and Announcements

### Expiration of Certification

As indicated in the previous agency newsletter, the certification of other individuals will expire in the next few months. The dates of expiration are indicated next to the name in the listing. The completion of an accredited refresher course is required before re-certification is possible.

The listing below identifies the **individuals whose certification has recently expired**. Each will get one last newsletter, however, their names have been removed from the listing in this newsletter.

#### Risk Assessors:

Catherine Brown  
Paul D. Brown

#### Supervisors:

Kenneth Kirk

**\*\*New HUD Rules Will Effect Future Lead Assessment and Abatement Activities\*\*\***

-continued on page 2-

## All Disciplines

Note, that after initial certification a refresher course must be taken within the two (2) year period from an accredited training provider in order to qualify for re-certification.

Although the course may be an EPA model and accredited either by EPA or another state does not qualify the course for re-certification.

These accredited courses are often limited, therefore do not wait until the end of the second year to find an approved course.

In addition, the refresher course must be of the same discipline as the certified individual is applying for. For example, an inspector can not take a refresher risk assessor course. Neither can a supervisor take a refresher worker course.

## Lead Hazard Company/Supervisor Issues

Abatement permit cost is based on agency cost for administrative time, inspection and sampling activities. This fee is based on each street address indicated in the project plan.

902 KAR 47:100 Section 14 "Fee Schedule" indicates that there is:

- \$225 fee is containment is conducted.
- \$100 - plus \$25 dollars for each room without containment
- \$125 exterior abatement

"With containment" means that the project is limited to a smaller area (four rooms or less). Lead contamination is prevented by placing a airlock (plastic sheeting) over a doorway or other temporary enclosure designed to eliminate dust movement or the tracking of dust and other lead laden material into other areas of the residence.

"Without containment" means no airlocks or other barriers are being used therefore there is a potential for the contamination of all rooms in the residence. Additional sampling is required.

**Updates/Announcements**

## **New Federal HUD Rules**

The following information was obtained from the EPA booklet identified as September 1999, Office of Lead Hazard Control.

24 CFR Part 35 "Requirements for Notification, Evaluation and Reduction of Lead-Based Paint Hazards in Federally Owned Residential Property and Housing Receiving Federal Assistance"

New Housing and Urban Development (HUD) regulation will become effective September 15, 2000 except for Section 15, 1999 which concerns prohibited practices, etc. which becomes effective November 15, 1999.

The regulation is being issued under sections 1012 and 1013 of the Residential Lead-Based Paint Hazard Reduction Act of 1992, which is Title X ("ten") of the Housing and Community Development Act of 1992. Sections 1012 and 1013 of Title X amended the Lead-Based Paint Poisoning Prevention Act of 1971, which the basic law covering lead-based paint in federally associated housing.

The regulation sets hazard reduction requirements that give much greater emphasis than existing regulations to reducing lead in house dust. Scientific research has found that exposure to lead in dust is the most common way young children become lead poisoned. Therefore the new regulation requires dust testing after paint is disturbed to make sure the home is lead-safe. Specific requirements depend on whether the housing is being disposed of or assisted by the federal government, and also on the type and amount of financial assistance, the age of the structure, and whether the dwelling is rental or owner-occupied.

To obtain copies of the regulation or for general questions contact the National Lead Information Center at (800) 424-Lead. The regulation can also be downloaded from the Internet at [www.hud.gov/lea/1012test.doc](http://www.hud.gov/lea/1012test.doc).

**Note that some of the activities indicated in the NEW HUD regulation is less stringent than state regulations. Therefore, in those instances state rules will be followed.**

The differences between HUD regulations and state rules will be discussed in following issues of this newsletter.

## **Lead Hazard Company/Supervisor Issues -cont-**

In order to clear up the cost of an abatement permit the following is the established policy:

- Under present policy the maximum interior abatement fee will be \$225 per street address.
- The fee would only be less if abatement was conducted only within four adjoining rooms adjoining within the entire building.
- Both interior and exterior fee may be applicable.

Also as indicated by law, future adjusts to the fee schedule will have to be made if the total fee collection does not support the program.

"Exterior" abatement involves removal of lead based paint, replacement or encapsulation activities. The components are generally on the outside of the building, however as in the case of "window and door" replacement interior abatement is also taking place. These components extend into the building and require interior lead hazard control by the contractor. Soil abatement is also considered as exterior abatement.

## **Inspector/Risk Assessor Issues**

### **Submission of Reports**

During recent abatement permit application that were based on inspection results, we found that in some occasions inspections and risk assessment reports are not being provided to the Department in accordance with 902 KAR 47:100. Note that copies of the reports are required to be provided to this agency within thirty (30) days of the completion of the activity.

Note that the following is the agency's established guideline and procedure:

- First time violation "Warning"
- Second time violation "Hearing"
- Third Time "Suspension or loss of Certification"

-continued on page 6-

## Certification Listing

### Lead-Hazard Risk Assessors

Individual certified Lead Hazard Workers associated with the above companies are not listed but can be obtained by contacting the environmental lead program.

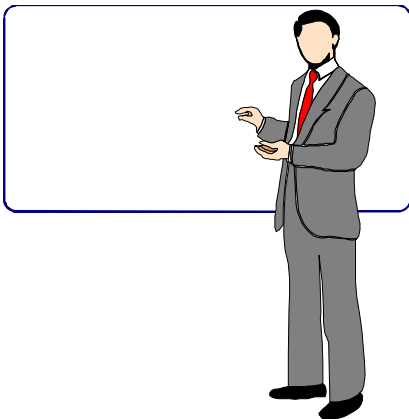

## Training Provider Issues

Be advised that this agency is reviewing training provider applications and other file information to assure that our files are up-to-date and all training providers are complying with specific regulatory requirements. You may be contacted in the near future. Items in particular that are under review are:

- Principal instructor(s) experience and lead specific training.
- Hands-on assessment requirements
- Record Keeping
- Course certificates
- Course tests and grading
- Updating course materials (new EPA model courses)

## Accredited Training Courses
